WEBSITE PROJECT PROPOSAL: HYDRAULICS STORES

Organisation Overview

Hydraulics Stores is a South African luxury fashion retailer founded in 1993. The company has expanded across major cities and offers high-end streetwear, footwear, and accessories. It combines global fashion trends with local culture, positioning itself as a premium fashion destination. The brand targets young adults and professionals who are fashion-conscious and fall within the middle- to high-income market segment.

Website Goals and Objectives

The primary goal of the Hydraulics Stores website is to increase online sales while strengthening brand awareness in the South African market. The website should also provide an improved user experience that encourages customers to browse and complete purchases efficiently. Key performance indicators (KPIs) include website traffic, conversion rate, average session duration, and the number of completed purchases. These metrics will help measure the effectiveness of the website.

Current Website Analysis

The current website has a modern design, strong branding, and clear navigation, which makes it visually appealing and easy to use. However, it has some weaknesses, including limited interactive features, basic search and filtering options, and areas where mobile optimisation could be improved. Addressing these issues will enhance user engagement and overall functionality.

Proposed Website Features and Functionality

The proposed website will include essential pages such as Home, About, Shop, Contact, and FAQ. It will also incorporate features like advanced product filtering, a secure checkout system, customer account functionality, and product reviews and ratings. These features will improve usability and provide a more interactive shopping experience for users.

Design and Appearance

The design of the website will follow a minimalist approach using a black and white luxury theme that reflects the brand identity. High-quality images will be used to showcase products effectively, while a clean layout and intuitive navigation will ensure a smooth user experience. The website will also be fully responsive to support mobile users.

Technical Requirements

The website will be developed using HTML, CSS, and JavaScript to ensure a responsive and interactive interface. It will require reliable web hosting and a domain name, as well as the use of responsive frameworks to ensure compatibility across devices.

Timeline and Milestones

The project will be completed over eight weeks. The first two weeks will focus on planning, followed by design in weeks three and four. Development will take place in weeks five and six, testing in week seven, and final submission in week eight.

Budget

The estimated budget includes hosting costs of approximately R1000 per year, a domain cost of R200 per year, and development costs estimated at R5000. These costs provide a realistic overview of the resources required for the project.
